VETTERY

Job Application for Full Stack Engineer

To Whom it May Concern,

About Me

Despite the fact that I'm a junior engineer, I have a strong passion for elegant design. I care deeply about code readability, and I always strive to write code such that its intent is expressed as clearly as possible without sacrificing performance.

I've also worked with a decent number programming languages fairly deeply. My experience ranges from web apps and machine learning with Python to building a Go compiler using OCaml. A healthy dose of JavaEE and Javascript (Node, React, ...) too.

My area of interest is scalability. I've taken advanced courses in concurrent programming, distributed systems, and cloud computing. Over the next few years I'd like to apply and refine this knowledge by building robust and scalable cloud architectures. This means I'm definitely looking to continue getting my hands dirty with AWS, Docker, Terraform, and the like.

Why Full Stack Engineer at Vettery

The position at Vettery is particularly interesting to me because it'll give me the chance to help other engineers in their careers, but also because the position seems broad in scope. I'm avoiding positions that seem too specialized, and this job description seems broad enough that I can keep many different skills sharp. I'm particularly interested in collaborating with many different teams, such as the data science team, because I'm seeking positions that allow me to discover and pursue new career goals.

InClosing

Thanks for your time. I hope you will give me the opportunity to prove that I will be a great value-added hire at Blend. I look forward to hearing from you and learning more about this opportunity.

Stuart

In Closing

Thanks for your time and consideration. I hope to hear from you soon.

Sincerely,

Stuart Mashaal
